### **LOFT TAKES DELIVERY OF CJ1 FULL FLIGHT SIMULATOR AND OPENS TRAINING CENTER**

Flight Crew Systems, Inc., dba LOFT of Carlsbad, California has taken delivery of a CitationJet1 (Model CE-525) full flight simulator manufactured by ASE, Inc. of Odessa, Florida. The simulator arrival marks the grand opening of the new LOFT Flight Training Center located at 6138 Innovation Way in Carlsbad, California, 92009. The newly constructed training center is approximately 1.5 miles from Palomar Airport and will house the flight simulator and offer a client reception area, classrooms, offices, a kitchen, and self-study areas.

The CJ1 simulator with a simulated Collins Pro Line 21 avionics suite sim is currently undergoing testing to ensure Level C certification under the National Simulator Program. Implementing ASE's new 32" stroke electric motion system, the CJ1 flight simulator will provide a safe and efficient training platform for clients to gain initial certification as well as recurrent training. The CJ1 flight simulator marks the beginning of a multi-simulator training facility with a second Level C full flight simulator currently under development.

LOFT has successfully performed in-aircraft jet training for over 10 years. The company specializes in Cessna Citation aircraft and offers a multitude of courses to include initial pilot certification, recurrent training, second-in-command training, and mentor programs. The debut of the CJ1 simulator will diversify the course offerings and propel the company into the simulator-based training field. LOFT intends to unveil new proprietary course materials in conjunction with the CJ1 simulator courses. LOFT's mission is to provide the highest quality CitationJet training at competitive prices.
